

TCI / THUREN SBN CARB ANGLED FLAME ARRESTOR ADAPTER

- 6061 Aluminum 5 Axis machined
- Fits 4 top bolt SBN Mikuni Carburetors
- 2.75" diameter top flange for flame arrestor.

!!!! IMPORTANT !!!!

The supplied bolts are intentionally too long. This is so you can put a little blob of Loctite, Silicone, Glue, or something on the threads protruding from the bottom of the carb top flange. Reason for this is if the internal bolts become loose, this bit of glue on the threads will keep them from rattling their way out completely. If those internal bolts rattle all the way out, say goodbye to your motor. Do not ignore and/or skip this step!!!!

We also suggest a thin layer of 1211 or fuel proof sealant on top flange between our adapter and the carb. Being at a 45* angle, fuel mist in the area while the engine is running, can run down the inside of the adapter and then weep out between the adapter and carb. Not a huge deal, but will help keep your engine bay more clean.

THREAD LOCKER HERE.
BOTH SIDES!!!
